

RESIDENTIAL CASE STUDY

UNITED STRUCTURAL SYSTEMS

Project: Residential Remediation

Owner: David Latherow

Location: Ashland, KY

Engineer: Stantec

Description: Residential structure exhibited settlement along entire exterior wall with exception to front. Settlement was in magnitudes of approximately 2 inches or less. Visible observations, such as "stair step" cracking was observed on brick. Other observations included doors unable to close and windows unsealed.

Solution: 15 Push Piers were installed at 6.0 feet o.c. Lifting of the foundation was performed. After 5 days, the install was completed and the structure was reset to original elevation.

"USS was very professional, courtesy, and hard working."
